DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13 drawn to determine an orientation angle of the scanned image, classified in class 382, subclass 286.
 - II. Claims 14-30, drawn to determine translation amount between first image and second image, classified in class 382, subclass 286.
 - III. Claims 31-45, drawn to estimate a rotation amount and translation coordinates for a scanned image, classified in class 382, subclass 286.
2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination are separately usable. In the instant case, subcombination I has separate utility such as a method of determining an orientation angle of the scanned image, subcombination II has separate utility such as a method determining translation amount between first image and second image and, subcombination III has separate utility such as a method estimating a rotation amount and translation coordinates for a scanned image See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR

1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
